

STARBOARD SUP

Building on the strengths from last years best selling range we have taken the steps to offer the most exciting and efficient SUP range ever seen.

Introducing 4 base technologies, producing 6 actual design options, in 10 different shapes.

Adding on a revolutionary Stand On Top kayak program with 3 shapes by Jim Drake for Feb shipments, our avenue into the vast kayak/canoe market.

Our super coffee table catalogue will be available Dec 15th. We will introduce the new web site on Jan 15th.

Technologies

Technora: Our very lightest sandwich technology.
Complete top and bottom PVC/glass/ Epoxy Sandwich. Full EVA deck.
No mast track or strap inserts available as this is a weight conscious model.
There will be a growing demand in the market for the lightest SUP.

Sportech: Our legendary **Wood** SUP.
Wood deck/glass epoxy compression molding, 3/4 EVA deck.
Mast track and strap inserts available as per overview.

Tufskin: Our impact resistant range.
Available in popular **Camo Blue**, cool **Camo black**, and the rainbow colored **Candy**.
Glass epoxy compression molding with wood reinforcement on the deck.
Full EVA deck. Mast track and strap inserts available as per overview.

Classic Tufskin is available with the break through **Star touch** deck texture. Star touch, grips when wet, no more wax jobs, no EVA deck, all yellow and white.
No mast track or strap inserts and the weight reduction at 1.2 kg by also taking away the EVA deck. We expect this unique technology choice to become our best seller, as its also our price point.

Weight indications: The 9'0" x 30" approval boards showed the following weights:

Technora	9.6 kg
Sportech	10.5 kg
AST	10.9 kg
Classic	9.7 kg

We are this year due to demand delivering all boards from 11'2 and down to 8'5" with **FCS** fins. The 12'6", 12'0", 11'2" and 10'5" also have an **additional 9 inch** fin to drastically improve directional stability for flat water days.

Starboards evolutionary line of SUP boards

14'8" The Point

The 14'8" Point board continues into next season with its current race winning shape. On a downwinder with a bit of swell or waves, no production board comes close. The first production Point board with a steering lever.

12'6" x 30" Cruiser

Known as a great, fast cruiser for both open ocean and lakes the 12'6" continues in its current shape. It's exceptional glide comes from the added length and the smooth stable feeling makes it a hit for "down winders" and "point to point" paddling. The 12'6" is also a cool board to catch your first waves with and it surprises with its good carving ability. Being probably the best tandem surf board ever, the 12'6" is a classic allrounder.

12'0" x 32" Big Easy

Great in every sense of the word, easy and stable to paddle thanks to its great width and length. The increased tail rocker and pinned out aft section makes it turn very well for its size. The flattened out mid front section provides great nose riding ability, and makes it paddle easy into the waves. Its very well suited to moving up and down the board long board-style in waves. A nice large board that makes things easy and fun.

11'2" x 30" The Blend

Our most popular board with its roots from traditional longboarding. It's smooth paddling and glide onto waves, has been enhanced with a lively response and drive out of a turn with increased V numbers in the hip, and thin refined rails. The deck is quite flat for better paddling and also more grip while on the wave. It's flat nose section is great for nose riding and it's a very comfortable board to walk.

10'0" x 34" The Whopper

Probably the most significant breakthrough in SUP since the paddle was introduced. This extremely stable board at 34 inch provides support to keep on paddling through white water or other difficult conditions right away. It has reasonably good glide and it turns on dime while paddling. The extra nose kick makes it possible to even catch white water waves with ease. The stability makes it a breeze to paddle into waves and get surf. The BIG surprise is that this board rocks on a wave, it really turns and is a fantastic wave board for most conditions, and is surely the most versatile wave dedicated SUP board ever shaped.

10'5" x 30" Drive

The new mid size of the range balancing between stability, manoeuvrability and glide. At 30 inches width the smooth pintail and wide nose feels small on the wave and plenty stable while paddling. The deck is flattened out for better foot grip and the rails are thinned down for a slightly sharper feel. It's rocker line progressed from the 11'2 and the increased V numbers in the back foot area combine to produce a board with extreme drive and speed, yet is loose and responsive. More than anything it really feels alive. A great all-rounder for a flat water cruise. It's fun in marginal surf and goes very well in serious waves as well.

9'8" x 28.5" Super Fish

For full blown rail to rail tight pocket turning and vertical performance. Like it's wider brother, it carries the deep mono concave to provide lift on to waves, drive through turns and acceleration to get around sections. A board for the experienced who wants to push their SUP surfing to totally new levels. This is the board where you're prepared to sacrifice paddling stability and look for the best surfing SUP available. The new milestone in surfing.

9'8" x 30" Element

The very successful design elements of the 10'5" condenses into a shorter and even more performance oriented board. Still stable for its size and providing direct paddling. It has extreme acceleration and due to shorter lengths and refined rails allows for greater precision whilst maintaining drive and fluidity through turns.

9'0" x 30" Stinger

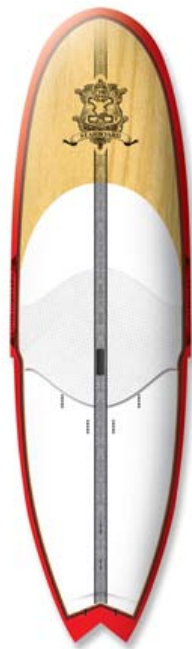

Looking for more surf performance, the shorter length SUP boards are coming of age. The width of 30" provides surprisingly much stability especially due to the wide nose area, which also supports getting into the wave. With the quad set up this shape paddles quite straight and its pulled in back half section is creating the Stinger effect. This radical Stinger edge produces the sensation of a narrower board when you step back and for waveriding. Greater acceleration and speed, with faster rail to rail response and agility. US middle fin box for more tracking or with the use of a rig for windsurfing.

8'5" x 30" Pocket Rocket

The 8'5" opens for a whole new game of SUP surfing. With this board the sport changed and riders getting onto it see their performance and stoke level go through the sky. It's a board for ambitious surfers or those who are into a quick learning curve, expect the unexpected from the Pocket Rocket. Greater acceleration and speed, with faster rail to rail response and agility.

SUPer 12'6"

The SUPer 12'6" is the worlds first SUP with a daggerboard system. As a board that gets anyone on the water in zero time, the SUPer 12'6" is the key to unlock the potential of light-wind windsurfing to SUP paddling. The long, slender shape glides smoothly and catches waves easily with surprising manoeuvrability. SUP is so fun and easy that it requires no instructions. Our 12'6" is the ultimate board for the entire family, hotels and resorts. The bonus is that it opens the gate to the wonderful world of windsurfing. With its integrated mast track, its daggerboard system and fitted windsurfing sail, gives you the opportunity to beautifully glide across calm waters, but still manoeuvrable for light wind wave riding and old-school freestyling. Due to its 30" width also makes the board a perfect stable platform for learning and progressing in windsurfing. A true crossover between the two sports, the SUPer 12'6" is really 'super'. A classic design that opens a whole new world to a whole new audience.
